SUMMARY

Computer Engineering student with strong foundations in **Data Structures & Algorithms**, having solved **450+ problems on LeetCode**. Proficient in **Java and Python**, with experience building **scalable systems and REST APIs**. Interested in **system design, problem solving, and writing efficient, reliable code**.

EDUCATION

Thapar Institute of Engineering and Technology
BTech in Computer Engineering. CGPA : 8.59
St. Joseph Montessori School
ISC : 96.00% ICSE : 95.60%

Patiala, Punjab
Aug 2023 – June 2027
Lucknow, Uttar Pradesh
Mar 2015 – Feb 2022

EXPERIENCE

Undergraduate Research Assistant, Thapar University Jun 2025 – Sep 2025

- Analyzed **MRI-based brain tumor detection** using BRATS dataset (**1K+ scans**), developing preprocessing pipelines for medical image analysis
- Benchmarked **5+ CNN architectures** for tumor segmentation and prognosis prediction, comparing performance across models

PROJECTS

API Monitoring Dashboard 🔗

Technologies: **Java, Spring Boot, React.js, REST APIs**

Feb 2026

- Engineered a **full-stack API monitoring platform** tracking **latency, uptime, and HTTP status** across **5+ endpoints** in realtime.
- Designed **health-check mechanisms** and built **interactive dashboards** to enable faster failure detection and visualize system performance.

Disaster Intelligence System 🔗

Technologies: **Python, FastAPI, Scikit-learn, Gemini API, REST APIs, React.js**

Dec 2025

- Designed a **multimodal ML pipeline** combining **BiLSTM (GloVe)** for text filtering and **ResNet-50** for image classification, achieving **93% image accuracy** and **82% text accuracy**.
- Processed **10K+ tweets** and **13K+ images** with a **two-stage conditional pipeline**, reducing unnecessary computation and enabling **real-time disaster detection and alerting**.
- Integrated **FastAPI inference**, automated **report generation**, and **email-based alerting** for end-to-end deployment.

TOPSIS Decision Analysis Package (PyPI) 🔗

Technologies: **Python, NumPy, Pandas, PyPI, Flask**

Jan 2026

- Published **Topsis-Sameer-102303773** on PyPI, a pip-installable Python package implementing the **TOPSIS algorithm** for multi-criteria decision making.
- Built **CLI utilities** and a **Flask-based web interface** to automate ranking of alternatives from CSV datasets.

RELEVANT COURSEWORK

- Data Structures and Algorithms
- Database Management System
- Software Engineering
- Operating System
- Object-Oriented Programming
- Artificial Intelligence

TECHNICAL SKILLS

Languages: Python, Java, C/C++ , R, JavaScript, SQL

Frameworks: Spring Boot, React.js, FastAPI, Flask, Scikit-learn

Databases: MySQL, MongoDB

Developer Tools: Git, Docker, Linux (Ubuntu), VS Code, PyCharm, Google Colab

ACHIEVEMENTS

- LeetCode Knight** – Achieved a contest rating of **1867** on LeetCode.
- Code Marathon** 🔗 – Secured **1st Runner-Up** among **80+ teams** in a relay-style coding competition.

CERTIFICATES AND SHORT COURSES

- Unit Testing in Java** 🔗 : JUnit, Service Testing.
- CI/CD Pipeline with Docker: From Code to Deployment** 🔗 : Docker, CI/CD Pipelines.
- Open Source Model with Hugging Face** 🔗 : MultiModal, Natural Language Processing (NLP), Transformers.
- Full Stack Development Course** 🔗 : MERN Development.
